

Solenoid valves VUVG/valve terminal VTUG

Festo core product range
Covers 80% of your automation tasks

Worldwide:
Superb:
Easy:

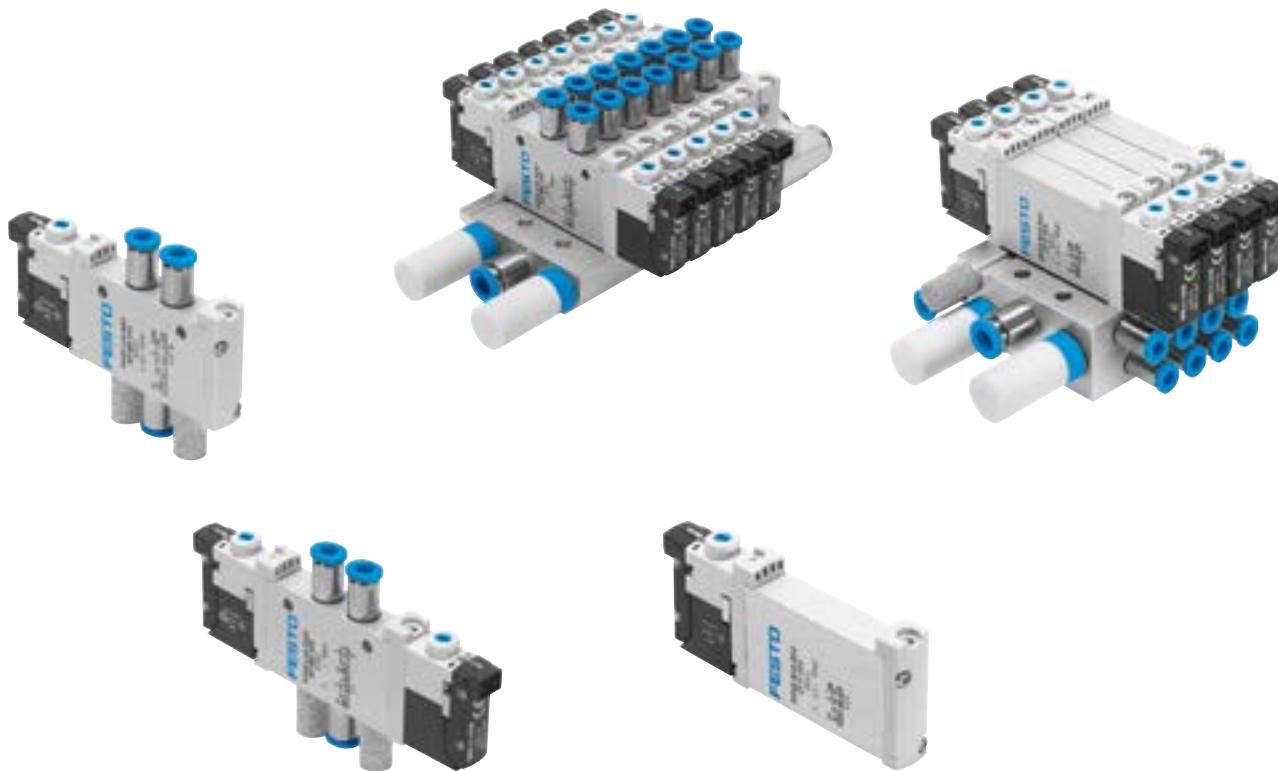

Always in stock
Festo quality at an attractive price
Simplified procurement and warehousing

★ Generally ready for dispatch from the factory within 24 hours
In stock at 13 Service Centres worldwide
More than 2200 products
★ Generally ready for dispatch from the factory within 5 days
Assembled for you at 4 Service Centres worldwide
Up to 6×10^{12} variants per product family

Just look
for the
star!

Solenoid valves VUVG

Characteristics

**Innovative**

- Can be set to internal or external pilot air supply for manifold assemblies with sub-base valves
- Maximum pressure 10 bar
- Design principle:
 - Piston spool with sealing ring (VUVG-LK, VUVG-BK)
 - Piston spool with sealing cartridge (VUVG-L, VUVG-B)

Flexible

- Wide range of valve functions
- Choice of quick plug connectors
- In-line valves
- Semi in-line valves for manifold assembly
- M5 and M7 in-line valves can be combined on one manifold rail
- Valve manifold assembly with pressure zones
- IP40, IP65
- Connection technology via:
 - E-box

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Fast troubleshooting thanks to 360° LED display
- Convenient servicing thanks to valves that can be replaced quickly and easily
- Choice of manual override: non-detenting, covered, non-detenting/detenting or detenting (without accessories)

Easy to install

- Secure mounting on wall or H-rail
- Easy mounting, captive screws and seal
- Connection technology easy to change via the E-box
- Identification holder for labelling the valves

Valve terminal configurator

A valve terminal configurator is available to help you select a suitable valve terminal VTUG. This makes it much easier to order the right product.

Valve terminals VTUG are ordered via an ident. code. All valve terminals are supplied fully assembled and individually tested.

This reduces assembly and installation time to a minimum.

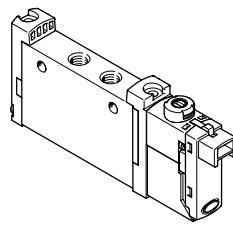

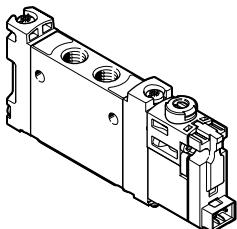

Download CAD data → www.festo.com

Ordering system for valve terminal VTUG
→ Internet: vtug

Characteristics – Pneumatic components

Individual valves and valve manifold assemblies

In-line valves as individual valve

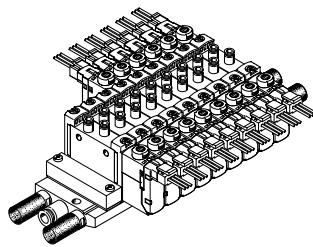

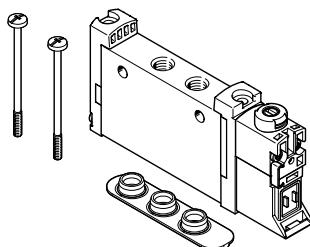

In-line valves are designed to be used without pneumatic linking. All pneumatic connections are on the valve and can be equipped with fittings/tubing. The electrical connection is provided by different E-boxes.

If a special seal set is used, in-line valves VUVG can also be mounted on a manifold rail (pneumatic linking) as semi in-line valves.

In-line valve VUVG-LK/VUVG-L

Semi in-line valves for manifold assembly

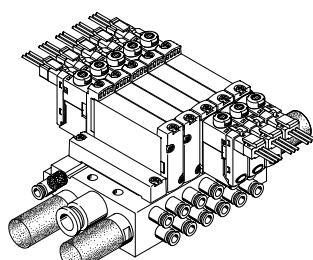

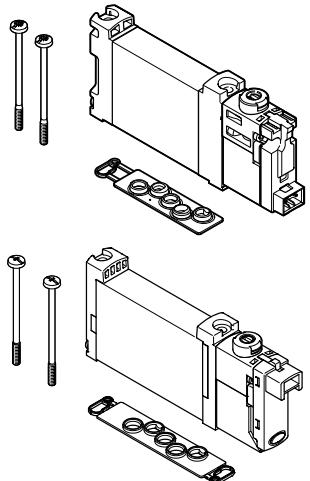

Semi in-line valve VUVG-S

Valve manifold assembly VTUG
comprised of
semi in-line valves VUVG-S

The supply ports (1, 3 and 5) of semi in-line valves are connected to the valve by a pneumatic link (e.g. sub-base).

The working ports (2, 4) are on the valve. The electrical connection is provided by different E-boxes.

Sub-base valves for manifold assembly

Sub-base valve
VUVG-BK/VUVG-B

Valve manifold assembly VTUG
comprised of
sub-base valves VUVG-BK/VUVG-B

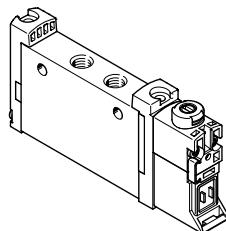

The supply ports (1, 3 and 5) and the working ports (2, 4) of the sub-base valves are connected to the valve by a pneumatic link (e.g. sub-base)

The electrical connection is provided by different E-boxes.

Solenoid valves VUVG

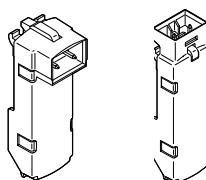

Characteristics – Pneumatic components

Basic valves VUVG

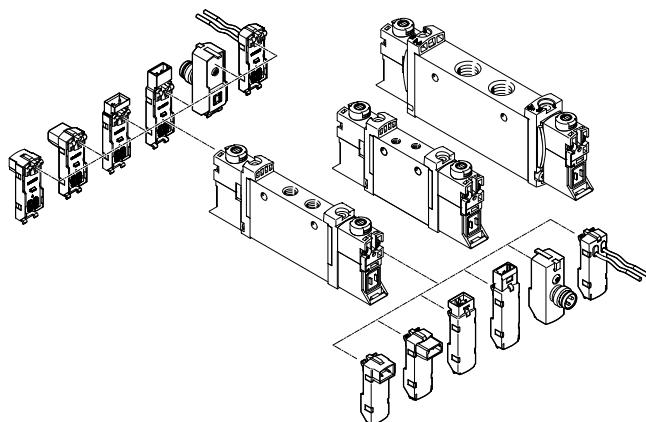

- Size 10, 14 and 18 mm
- In-line valves and semi in-line valves
- Sub-base valves
- 2x 3/2-, 5/2- and 5/3-way valves

E-boxes

- 5, 12 and 24 V DC
- With or without holding current reduction
- LED

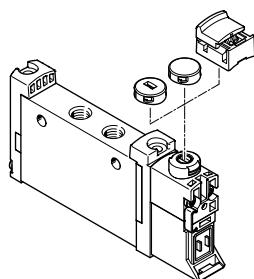

Combinations of basic valve and E-boxes

Note

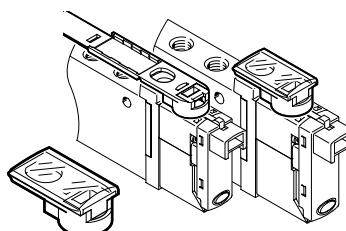

More E-boxes → page 104

Cover caps for manual override

- Closed cover cap, covered manual override
- Slotted cover cap, non-detenting manual override
- Cover, detenting manual override

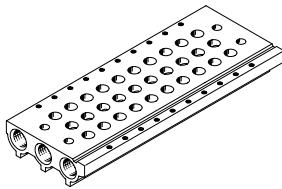

Identification holder

- The identification holder is mounted in the same way as a cover cap for manual override
- The hinged identification holder covers the retaining screw and the manual override

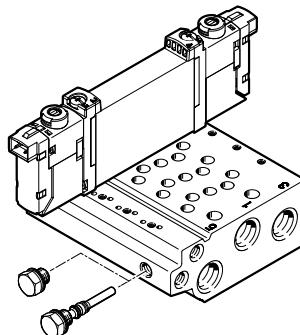

Characteristics – Pneumatic components

Manifold rail for in-line valves

- For in-line valves M3, M5, M7, G1/8 and G1/4
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 2 to 10 and 12, 14, 16 valve positions

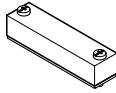

Manifold rail for sub-base valves

- For sub-base valves 10A, 10, 14 and 18
- Manifold rail with M5, M7, G1/8 and G1/4 working ports
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 2 to 10, 12, 14 and 16 valve positions
- The sub-base valves always have external pilot air. The pilot air is set via the manifold rail. A short and a long blanking plug are included in the scope of delivery of the manifold rail for this purpose.

 **Note**
Pressurisation and exhaust at both ends is recommended for an optimised flow rate in cases where multiple valves switch simultaneously.

Cover plate for vacant position

Vacant position cover

Supply plate

For additional air supply and exhaust via a valve position

Separator for pressure zones

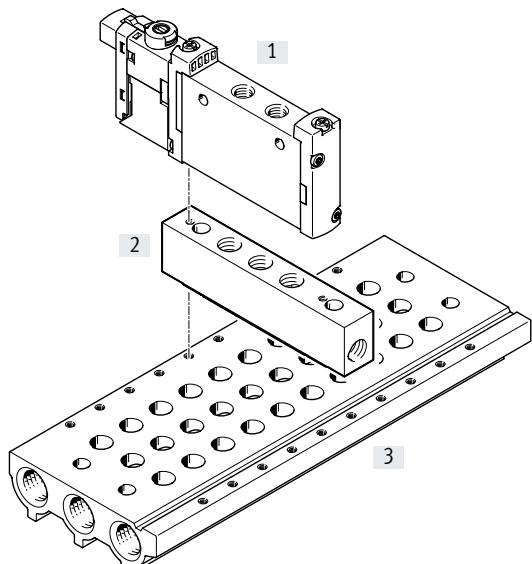

For creating multiple pressure zones in a valve manifold assembly

Solenoid valves VUVG

Characteristics – Pneumatic components

Vertical pressure supply plate

For in-line valves M5/M7 and G1/8

- [1] In-line valves VUVG
- [2] Vertical pressure supply plate
- [3] Manifold rail

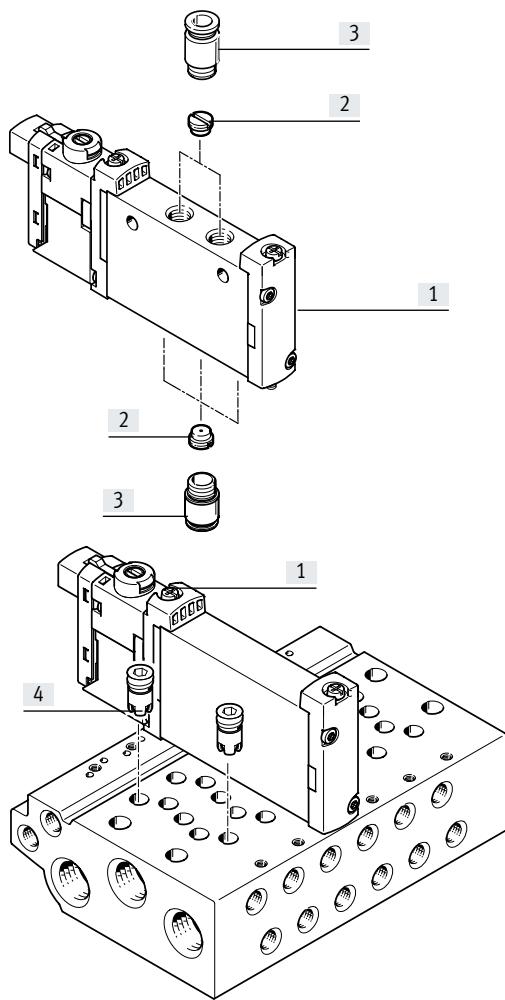

The vertical pressure supply plate allows for separate pressurisation and exhausting of the valve mounted on it.

If two vertical pressure supply plates are mounted one on top of the other, the valve can be supplied with compressed air and exhausted completely independently of the valve terminal (terminal code CS).

Code		Type	For in-line valves		Description
			M5/M7	G1/8	
ZU		VABF-L1-P3A	■	■	Plate with port 1 for supplying an individual operating pressure or separate exhausting (reverse operation) for a valve position.
ZV		VABF-L1-P7A	■	■	Plate with ports 3 and 5 for exhausting the valve or supplying an individual operating pressure (reverse operation) for a valve position.

Characteristics – Pneumatic components

Exhaust functions

- [1] Valves VUVG with individual electrical connection
- [2] Flow restrictor for thread M5
- [3] Fitting
- [4] Fixed flow restrictor, self-tapping/check valve

Flow restrictor for thread M5

In-line valve, individual electrical connection: flow restrictor can be fitted in port 1, 3, 5 and/or in port 2, 4.

Fixed flow restrictor, self-tapping

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5.

Sub-base valve, individual electrical connection: flow restrictor can be fitted in port 2, 4.

Please see the relevant assembly instructions:

→ www.festo.com/sp

Check valve

Check valves block the flow towards the valves if back pressure develops in ducts 3 and 5 in the case of a high exhaust capacity, thereby preventing actuators from switching unexpectedly. The check valves are screwed into ducts 3 and 5 in the manifold rail. Please see the relevant assembly instructions:

→ www.festo.com/sp

- Note

- It is not possible to use a check valve and a fixed flow restrictor (in the same duct) at the same time.
- When screwing in again, use the threads already present.

Solenoid valves VUVG

Characteristics – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VUVG.

Pressure zones are created by isolating the internal supply ducts between the manifold sub-bases by appropriate duct separation.

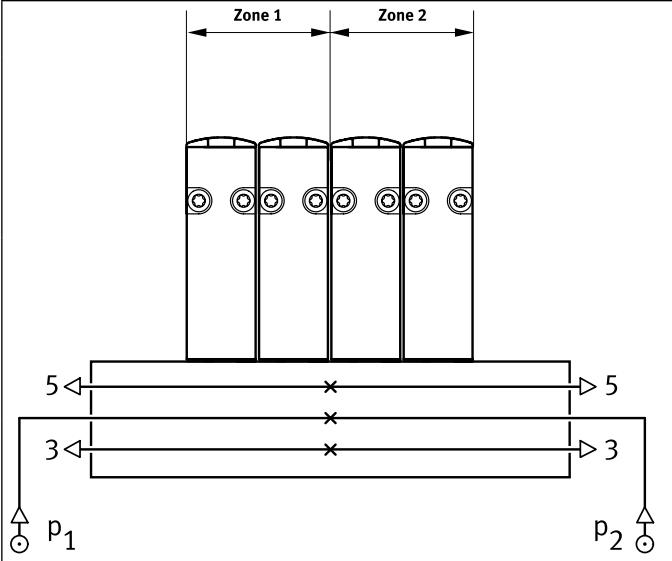

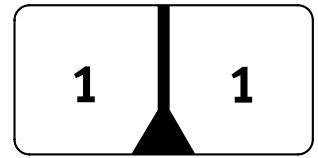

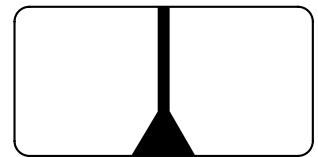

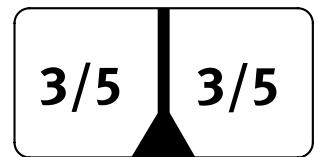

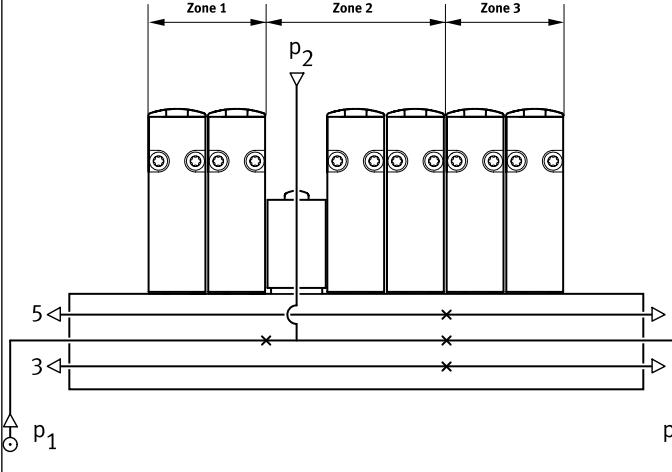

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

 Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

Duct separation

	Description
	<p>Pressure zones can be freely configured with the VUVG. The following duct separations are possible:</p>
	Duct 1 closed
	
	Duct 1, 3, 5 closed
	
	Duct 3, 5 closed
	
	<p>With the VUVG, the number of pressure zones is limited only by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>

Separator VABD

 Note

As the separators are fitted from only one side using a slotted screwdriver, several pressure zones can be created in one profile.

Characteristics – Pneumatic components

Pilot air supply

Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure in the range 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

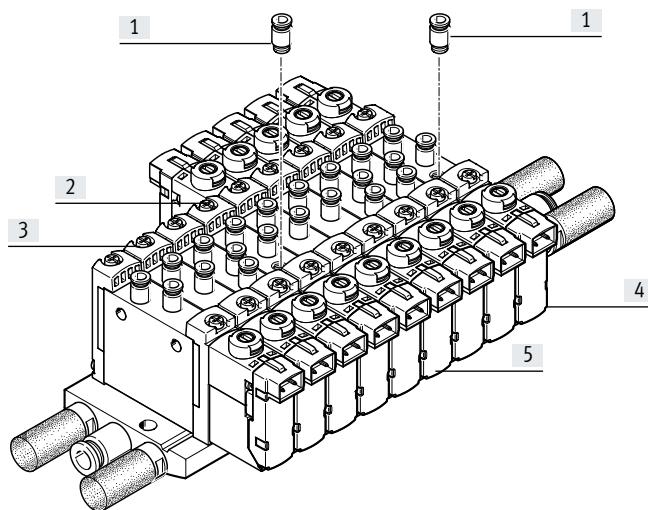

External pilot air supply

External pilot air supply is required for vacuum operation. The port for external pilot air supply (port 12/14) is located on the valve in the case of in-line valves and on the manifold rail in the case of sub-base valves.

Pilot exhaust air

With in-line valves, the pilot exhaust air escapes via exhaust holes. With sub-base valves, the pilot exhaust air is discharged via duct 82/84 of the manifold rail.

Pilot air supply with in-line and semi in-line valves

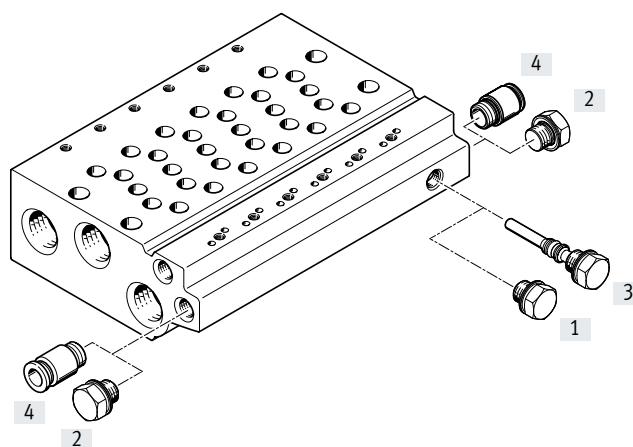

- [1] Push-in fitting for external pilot air supply at port 12/14
- [2] Single solenoid valve with external pilot air supply
- [3] Single solenoid valve with internal pilot air supply
- [4] Double solenoid valve with external pilot air supply
- [5] Double solenoid valve with internal pilot air supply

The internal pilot air is branched from port 1 in the valve body. The external pilot air (port 12/14) is supplied individually at each valve housing.

Note

Semi in-line valves cannot be supplied centrally with pilot air via the manifold rail.

Pilot air supply with sub-base valves

- [1] Blanking plug, short, with internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, with external pilot air
- [4] Push-in fitting in duct 12/14 with external pilot air

The manifold rails for sub-base valves have an internal connection between duct 12/14 and duct 1. Switching between internal and external pilot air supply is carried out by inserting a blanking plug into this conduit.

Solenoid valves VUVG

Characteristics – Pneumatic components

Operation with different pressures

Vacuum operation

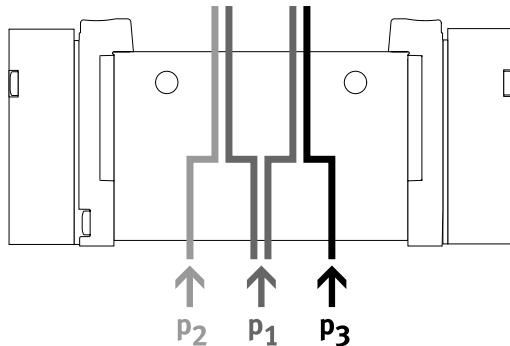

Points to note with 3/2-way valves

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Note

Pressure must be present at port 1.

Pressure deflector (internal pilot air)

Vacuum operation is therefore only possible at port 3 and 5, not at port 1. With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Reverse operation

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

- If two different pressures are required.

- Different pressures can be supplied at duct 1, 3 and 5.

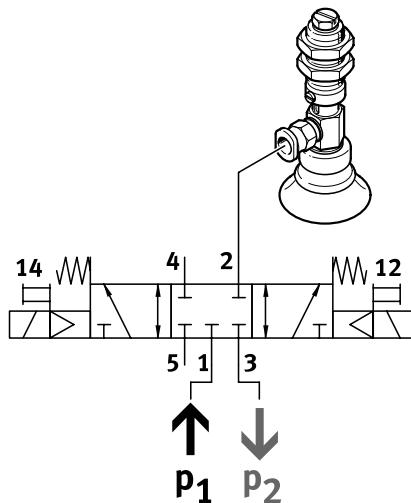

Note

- With internal pilot air supply, the minimum pilot pressure must be adhered to in duct 1
- With 2x3/2-way valves without spring return, the minimum pilot pressure must always be adhered to in duct 1

Advantages

Any pressure or vacuum can be connected at ducts 3 and 5 both with external and internal pilot air.

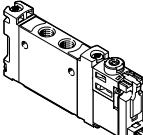

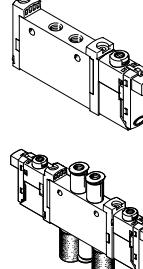

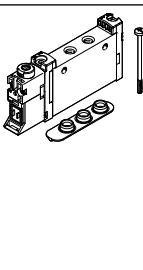

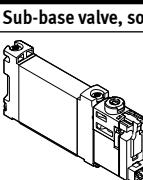

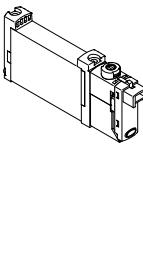

Vacuum, ejector pulse and normal position

Vacuum, ejector pulse and normal position can be achieved as follows:

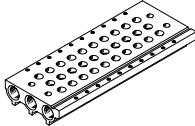

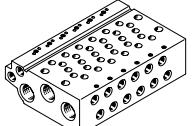

- Internal pilot air supply
- Vacuum in duct 3
- Pressure for the ejector pulse in duct 1

Product weight	[g]	38	49	37			
Certification		c UL us – Recognized (OL)					
		c CSA us (OL)					
		RCM					
CE marking (see declaration of conformity) ⁶⁾		To EU EMC Directive					
Corrosion resistance class CRC ⁷⁾		2					

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) Combined reset method

5) If several valves are to be screwed together via the through-holes to form a block, a minimum distance of 0.3 mm must be ensured by placing spacer discs between them.

6) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

7) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Generally ready for dispatch from the factory within 24 hours

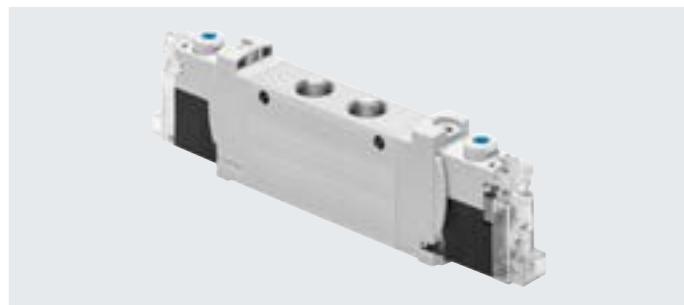

Generally ready for dispatch from the factory within 5 days

Solenoid valves VUVG-L10 and VUVG-S10, in-line valves M5

Data sheet

Function

2x 3/2C, 2x 3/2U, 2x 3/2H

- - Size 10 mm

5/2-way, single solenoid

- - Flow rate

5/2-way, double solenoid valve

125 ... 220 l/min

5/3C, 5/3U, 5/3E

- - Voltage

Circuit symbols → page 13

5, 12 and 24 V DC

General technical data VUVG-L M5

Valve function	T32-A	T32-M			M52-R	B52	M52-M	P53							
Normal position	C ¹⁾	U ²⁾	H ⁴⁾	C ¹⁾	U ²⁾	H ⁴⁾	-	-							
Stable position	Monostable					Bistable	Monostable	Monostable							
Reset method: pneumatic spring	Yes	No			Yes ⁵⁾	-	No	-							
Reset method: mechanical spring	No	Yes			Yes ⁵⁾	-	Yes	Yes							
Vacuum operation at port 1	No	Only with external pilot air supply													
Design	Piston spool														
Sealing principle	Soft														
Actuation type	Electric														
Type of control	Piloted														
Pilot air supply	Internal or external														
Exhaust air function	Can be throttled														
Manual override	Choice of non-detenting, covered, non-detenting/detenting or detenting														
Type of mounting	Optionally via through-holes ⁶⁾ or on manifold rail														
Mounting position	Any														
Nominal size	[mm]	2.7	1.9	1.8	3.2	2.2	3.2								
Standard nominal flow rate	[l/min]	150	135	125	125	220	190	210							
Flow rate on manifold rail	[l/min]	150	135	125	125	220	190	210							
Switching time on/off	[ms]	6/16	8/11			7/19	-	8/24							
Switching time changeover	[ms]	-				7	-	15							
Size	[mm]	10													
Port	1, 2, 3, 4, 5 12/14	M5 M3													
Product weight	[g]	55	54			45	55	44							
Certification	c UL us – Recognized (OL) c CSA us (OL) RCM														
CE marking (see declaration of conformity) ⁷⁾	To EU EMC Directive														
Corrosion resistance class CRC ⁸⁾	2														

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) If several valves are to be screwed together via the through-holes to form a block, a minimum distance of 0.3 mm must be ensured by placing spacer discs between them.

7) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

8) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Data sheet

Operating and environmental conditions		T32-A ¹⁾	T32-M ³⁾	M52-R ²⁾	B52	M52-M ³⁾	P53
Valve function							
Operating medium		Compressed air to ISO 8573-1:2010 [7:4:4]					
		Internal [bar]	1.5 ... 8	2.5 ... 8	2.5 ... 8	1.5 ... 8	3 ... 8
Operating pressure	External [bar]	1.5 ... 10	-0.9 ... 10			-0.9 ... 8	-0.9 ... 10
Pilot pressure ⁴⁾ [bar]		1.5 ... 8	2 ... 8	2.5 ... 8	1.5 ... 8	3 ... 8	
Ambient temperature [°C]		-5 ... +50, with holding current reduction -5 ... +60					
Temperature of medium [°C]		-5 ... +50, with holding current reduction -5 ... +60					

1) Pneumatic spring

2) Mixed, pneumatic/mechanical spring

3) Mechanical spring

4) Minimum pilot pressure 50% of operating pressure

Electrical data

Electrical connection	Via E-box → page 102
Operating voltage [V DC]	5, 12 and 24 ±10%
Power [W]	1, reduced to 0.35 with holding current reduction
Duty cycle [%]	100
Degree of protection to EN 60529	IP40 (with plug socket), IP65 (with M8)

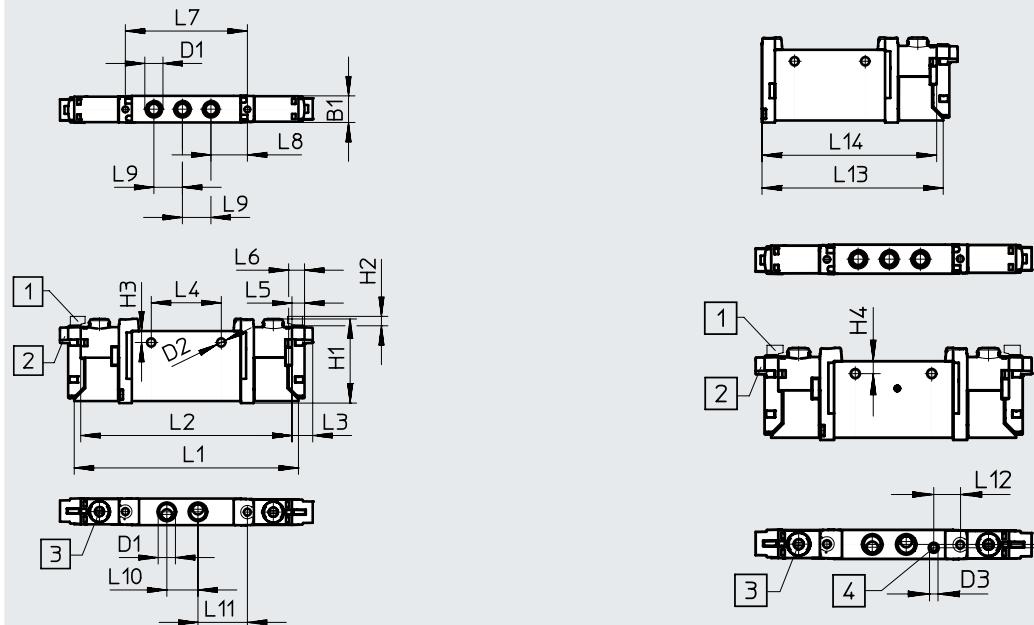

Information on materials

Housing	Wrought aluminium alloy
Seals	HNBR, NBR
Note on materials	RoHS-compliant

Valve function	T32-A ¹⁾	M52-A ¹⁾	B52
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]		
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)		
Operating pressure	[bar]	1.5 ... 7	2.5 ... 7
Ambient temperature	[°C]	-5 ... +50	1.5 ... 7
Temperature of medium	[°C]	-5 ... +50	

1) Pneumatic spring

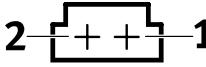

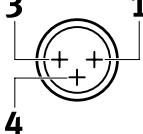

Electrical data

Electrical connection	Via E-box → page 102
Operating voltage	[V DC] 24 ±10%
Power	[W] 0.7
Duty cycle	[%] 100
Degree of protection to EN 60529	IP40 (with plug socket), IP65 (with M8)
Signal status display	LED
Maximum switching frequency	[Hz] 2

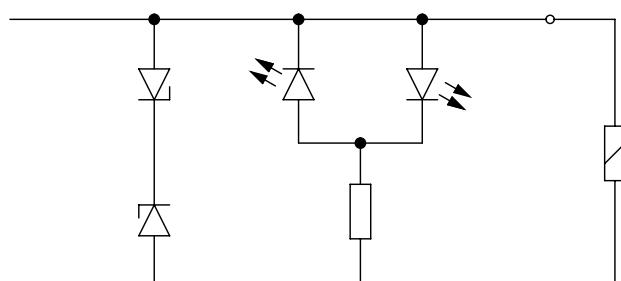

Information on materials

Housing	Wrought aluminium alloy
Seals	HNBR, NBR
Note on materials	RoHS-compliant Contains paint-wetting impairment substances

Pin allocation for E-box

	Pin		Description
Rectangular plug, connection pattern H			
	1	+ or -	Protective circuit without holding current reduction
	2	+ or -	
Round plug, M8, 3-pin			
	1	Not used	Protective circuit without holding current reduction
	3	+ or -	
	4	+ or -	

Protective circuit without holding current reduction

The solenoid coils are equipped with a protective circuit to arrest sparks and protect against polarity reversal.

Certification	c UL us – Recognized (OL) c CSA us (OL) RCM																		
CE marking (see declaration of conformity) ⁷⁾	To EU EMC Directive																		
Corrosion resistance class CRC ⁸⁾	2																		

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) H=2x 3/2-way valve in one housing with 1x normally closed and 1x normally open

5) Combined reset method

6) If several valves are to be screwed together via the through-holes to form a block, a minimum distance of 0.3 mm must be ensured by placing spacer discs between them.

7) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

8) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Solenoid valves VUVG-L18 and VUVG-S18, in-line valves G1/4

Data sheet

Operating and environmental conditions						
Valve function	T32-A ¹⁾	T32-M ³⁾	M52-R ²⁾	B52	M52-M ³⁾	P53
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]					
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)					
Operating pressure	Internal [bar]	1.5 ... 8	3 ... 8	2.5 ... 8	1.5 ... 8	3 ... 8
	External [bar]	1.5 ... 10	-0.9 ... 10

Certification	c UL us – Recognized (OL) c CSA us (OL) RCM					
CE marking (see declaration of conformity) ⁵⁾	To EU EMC Directive					
Corrosion resistance class CRC ⁶⁾	2					

1) C=Normally closed/mid-position closed

2) U=Normally open/mid-position pressurised

3) E=Mid-position exhausted

4) Combined reset method

5) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

6) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Solenoid valves VUVG-BK14, sub-base valves G1/8

Data sheet

Function 2x 3/2C	-  - Size 14 mm
5/2-way, single solenoid	-  - Flow rate 350 ... 380 l/min
5/2-way, double solenoid valve	-  - Voltage 24 V DC
Circuit symbols → page 13	

General technical data VUVG-BK			
	T32-A	M52-A	B52
Valve function			
Normal position	C ¹⁾	-	-
Stable position	Monostable		Bistable
Reset method: pneumatic spring	Yes	Yes	-
Design	Piston spool		
Sealing principle	Soft		
Actuation type	Electric		
Type of control	Piloted		
Pilot air supply	Internal		
Exhaust air function	Can be throttled		
Manual override	Non-detenting, detenting		
Type of mounting	On manifold rail		
Mounting position	Any		
Standard nominal flow rate	[l/min]	350	380
Switching time on/off	[ms]	13/20	14/24
Switching time changeover	[ms]	-	8
Size	[mm]	14	
Port	2, 4	G1/8 in manifold rail	
Product weight	[g]	75	65
Corrosion resistance class CRC ²⁾		2	85

1) C=Normally closed

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Safety data

Max. positive test pulse with 0 signal	[μs]	1600
Max. negative test pulse with 1 signal	[μs]	3000
Shock resistance		Shock test with severity level 1 to FN 942017-5 and EN 60068-2-27
Vibration resistance		Transport application test with severity level 1 to FN 942017-4 and EN 60068-2-6

Data sheet

Operating and environmental conditions			
Valve function	T32-A ¹⁾	M52-A ¹⁾	B52
Operating medium	Compressed air to ISO 8573-1:2010 [7:4:4]		
Note on the operating/pilot medium	Lubricated operation possible (in which case lubricated operation will always be required)		
Operating pressure	[bar]	1.5 ... 7	2.5 ... 7
Ambient temperature	[°C]	-5 ... +50	1.5 ... 7
Temperature of medium	[°C]	-5 ... +50	

1) Pneumatic spring

Electrical data

Electrical connection	Via E-box → page 102
Operating voltage	[V DC] 24 ±10%
Nominal operating voltage	[V DC] 22
Power	[W] 0.7
Duty cycle	[%] 100
Degree of protection to EN 60529	IP40 (with plug socket), IP65 (with M8)
Signal status display	LED
Maximum switching frequency	[Hz] 2

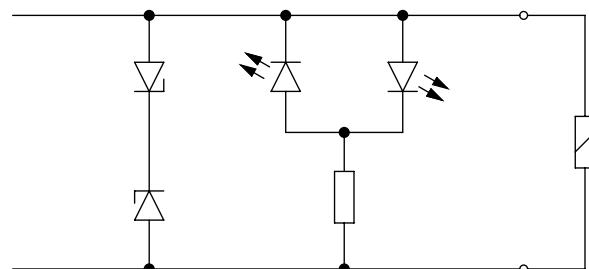

Information on materials

Housing	Wrought aluminium alloy
Seals	HNBR, NBR
Note on materials	RoHS-compliant Contains paint-wetting impairment substances

Pin allocation for E-box

	Pin		Description
Rectangular plug, connection pattern H			
	1	+ or -	Protective circuit without holding current reduction
	2	+ or -	
Round plug, M8, 3-pin			
	1	Not used	Protective circuit without holding current reduction
	3	+ or -	
	4	+ or -	

Protective circuit without holding current reduction

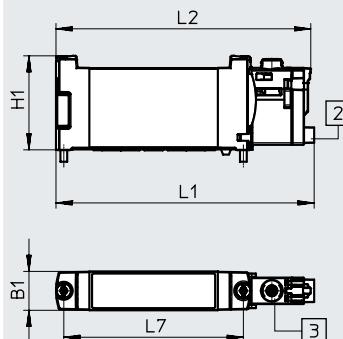

The solenoid coils are equipped with a protective circuit to arrest sparks and protect against polarity reversal.

Protective circuit without holding current reduction

The solenoid coils (P type) of the 5, 12 and 24 V designs are equipped with a protective circuit to arrest sparks and protect against polarity reversal.

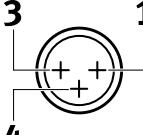

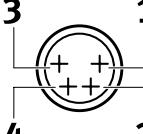

Protective circuit with holding current reduction

The 24 V DC design (R type) additionally features holding current reduction. This reduces the power from 1 W to 0.35 W.

Characteristics

Innovative

- Festo-specific I-Port interface for bus nodes (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master
- Festo-specific I-Port interface with interlock
- Variable multi-pin plug connection using Sub-D or ribbon cable
- Reversible piston spool valves, up to 24 valve positions
- Reduced power consumption
- Excellent price/performance ratio

Flexible

- Choice of quick plug connectors
- Multiple pressure zones possible
- Sub-D variant and fieldbus interface rated to IP67
- Internal or external pilot air with the same manifold rail possible through the use of blanking plugs
- Sub-base valves with working ports underneath for installation in control cabinets

Reliable

- Sturdy and durable metal components
 - Valves
 - Manifold rails
- Fast troubleshooting thanks to LED display
- Manual override: choose from non-detenting, detenting or covered

Easy to install

- Easy mounting thanks to captive screws and seal
- Connection technology easy to change
- Inscription label holder for labelling

Valve terminal configurator

A valve terminal configurator is available to help you select a suitable valve terminal VTUG. This makes it much easier to order the right product.

Valve terminals VTUG are ordered via an ident. code. All valve terminals are supplied fully assembled and individually tested.

This reduces assembly and installation time to a minimum.

Download CAD data → www.festo.com

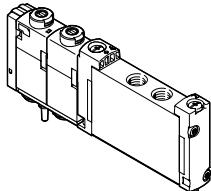

Ordering system for valve terminal VTUG
→ Internet: vtug

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics

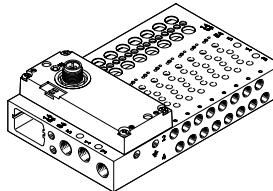

Sub-base and semi in-line valves for valve terminal VTUG

VUVG-S...1T1, semi in-line valve

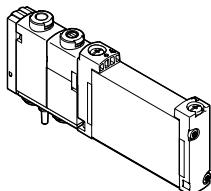

The supply ports (1, 3 and 5) of semi in-line valves are connected to the valve by a pneumatic link (e.g. sub-base). The working ports (2, 4) are on the valve.

Valve terminal VTUG with variable electrical connection

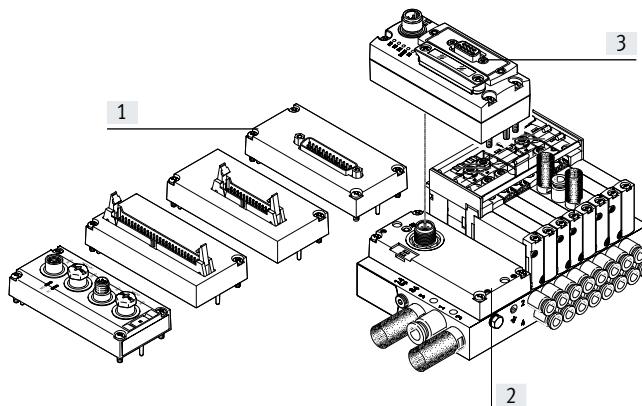

VUVG-B...1T1, sub-base valve

The supply ports (1, 3 and 5) and the working ports (2, 4) of sub-base valves are connected to the valve by a pneumatic link (e.g. sub-base).

Overview – Valve terminal with multi-pin plug connection and fieldbus interface

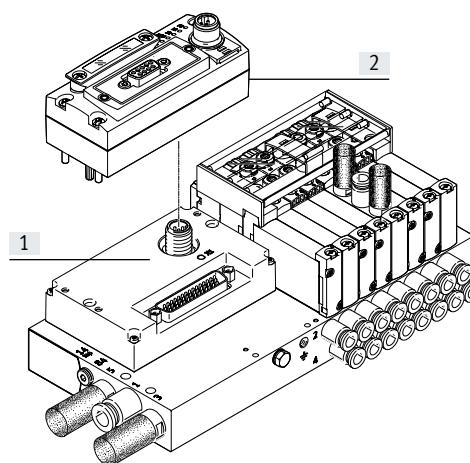

Variable electrical connection:

- [1] Ribbon cable or Sub-D
- [2] I-Port interface

- [3] CTEU bus node

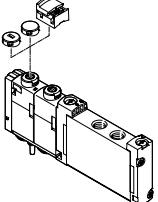

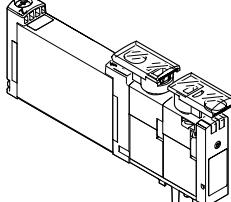

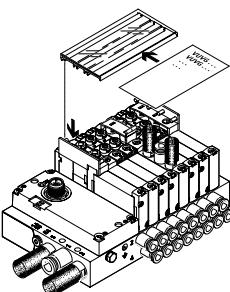

Overview – Valve terminal with interlock

Variable electrical connection:

- [1] I-Port interface with interlock
- [2] CTEU bus node

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Pneumatic components

Manifold rail

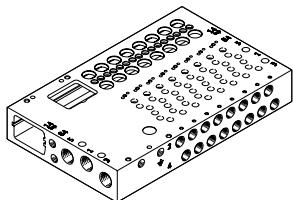

For semi in-line valves

The semi in-line valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For semi in-line valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical interlinking

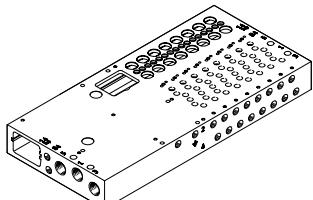

For sub-base valves

The sub-base valves are supplied with external pilot air. The pilot air is set via the manifold rail. The scope of delivery of the manifold rail includes a short and a long blanking plug for setting the pilot air.

- For sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- For 2x 3/2-way, 3/2-way, 5/2-way and 5/3-way valves
- 4 to 24 valve positions with electrical interlinking

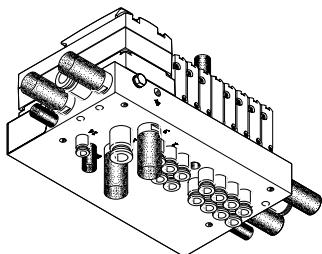

Long version

Versions:

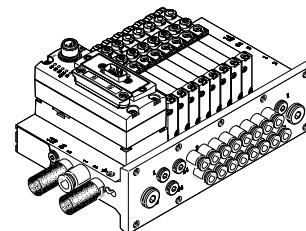

- I-Port interface with lateral outlet orientation: for semi in-line valves and sub-base valves M5/M7 (size 10), G1/8 (size 14) and G1/4 (size 18)
- Interlock:
For sub-base and semi in-line valves M5/M7 (size 10)

For control cabinet installation, outlet orientation underneath (U)

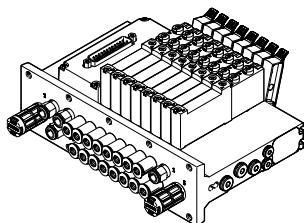

For sub-base valves M7 (size 10), G1/8 (size 14) and G1/4 (size 18).

For control cabinet installation, outlet orientation front (FD)

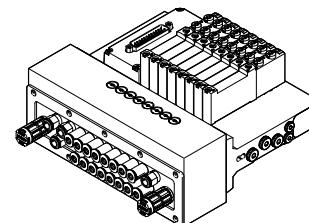

For sub-base valves M7 (size 10) and G1/8 (size 14).

For control cabinet installation with shut-off function (hot swap)

Shut-off function for duct 1, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal pilot air supply only
- Vacuum operation not possible

Shut-off function for duct 2 and 4, for sub-base valves M7 (size 10) and G1/8 (size 14):

- Internal/external pilot air supply
- Vacuum operation not possible

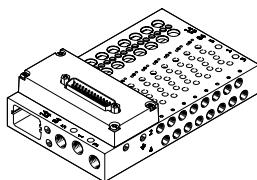

Note

Pressurisation and exhaust at both ends is recommended for an optimised flow rate in cases where multiple valves switch simultaneously.

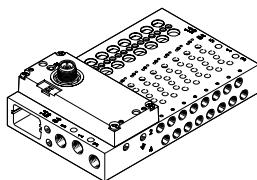

Characteristics

Electrical connection

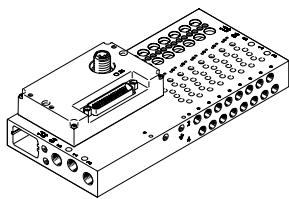

Multi-pin plug connection

I-Port interface

I-Port interface with interlock

The signals are transmitted from the controller to the valve terminal via a pre-assembled or self-assembled multi-wire cable to the multi-pin plug connection.

This substantially reduces installation time compared to individually connected valves. The valve terminal can be equipped with max. 48 solenoid coils.

Versions:

- Sub-D connection
- Ribbon cable

Festo-specific interface as a basis for bus nodes (CTEU) or in IO-Link mode for direct connection to a higher-level IO-Link master.

Communication and power supply take place via a common M12 interface.

Connectivity options:

- As I-Port interface for bus nodes (CTEU)
- In IO-Link mode for direct connection to an IO-Link master

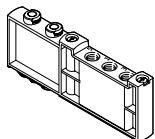

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

The external supply guarantees safety-related release of these valves.

- - Note

The VTUG variant with multi-pin plug connection and fieldbus interface offers the additional option of individual electrical actuation of the valves (→ page 133).

Supply plate

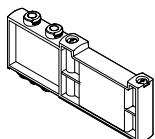

For additional air supply and exhaust via a valve position

- - Note

The supply plate VABF-L1-14-P3A4-G18-T1 can only be used with G fittings. R fittings are not permissible.

Cover plate for vacant position

Vacant position cover

Separator for pressure zones

For creating multiple pressure zones in a valve terminal

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Pneumatic components

Creating pressure zones and separating exhaust air

Compressed air is supplied and exhausted via the manifold rail and via supply plates.

The position of the supply plates and duct separations can be freely selected with the VTUG.

A pressure zone is created by separating the internal supply ducts using a separator.

Pressure zone separation can be used for the following ducts:

- Duct 1
- Duct 3
- Duct 5

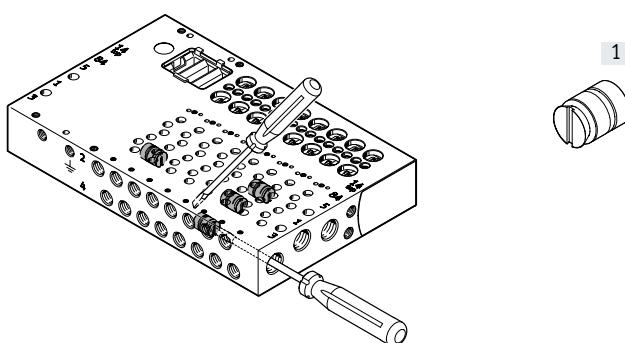

Note

- Use a separator if the exhaust air pressures are high
- Use at least one supply plate/supply for each pressure zone
- Pressure zone separation is not possible in duct 12/14 (pilot air supply)

Duct separation

	Description
	<p>Pressure zones can be freely configured with the VTUG. The following duct separations are possible:</p> <p>Duct 1 closed</p> <p>Duct 1, 3, 5 closed</p> <p>Duct 3, 5 closed</p>
	<p>With the VTUG, the number of pressure zones is limited only by the number of valve positions on the manifold rail. Note that each supply plate occupies one valve position.</p>

Separator VABD

[1] Separator VABD

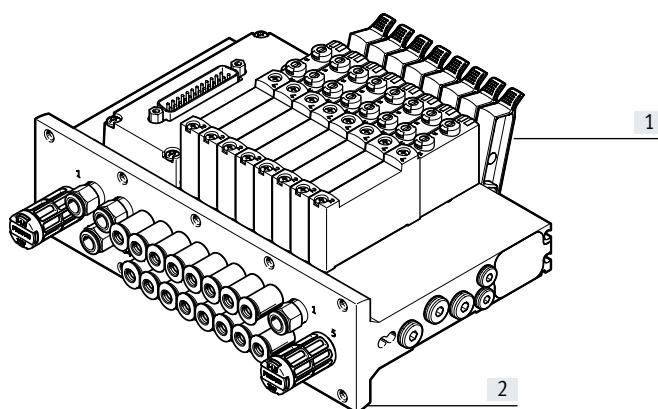

Note

With the VTUG, several pressure zones can be created by fitting separators (VABD). The separators are inserted in the manifold rail using a slotted screwdriver.

Characteristics – Pneumatic components

Shut-off function (hot swap)

For duct 1

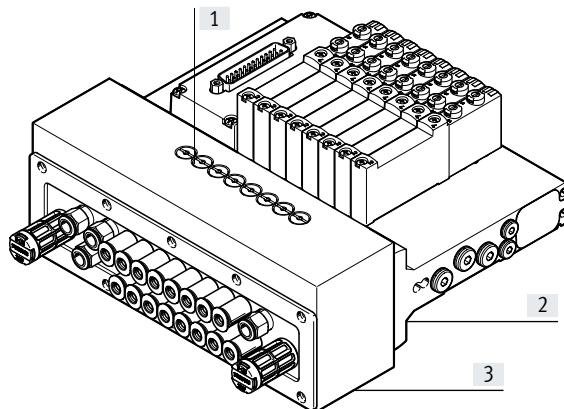

- [1] Actuating lever
- [2] Manifold rail with shut-off plate

The shut-off plate is located below the manifold block. Actuating the lever:

- disconnects the valve from the compressed air supply (duct 1)
- exhausts the pilot air supply on the valve side (duct 12 and 14)

The actuating levers can be individually locked in place, securing them against unwanted actuation.

For duct 2 and 4

- [1] Plunger
- [2] Manifold rail
- [3] Manifold block

To actuate, press in the plunger with a pointed object or screwdriver and then turn clockwise through 90° until the stop is reached:

- Connection from the valve to ports 2 and 4 is blocked
- No exhaust of components connected at ports 2 and 4

Pilot air supply

Internal pilot air supply

Internal pilot air supply can be chosen with an operating pressure in the range 1.5 ... 8 bar, 2.5 ... 8 bar, or 3 ... 8 bar (depending on the valve used).

The pilot air supply is branched from duct 1 (compressed air supply) using an internal connection.

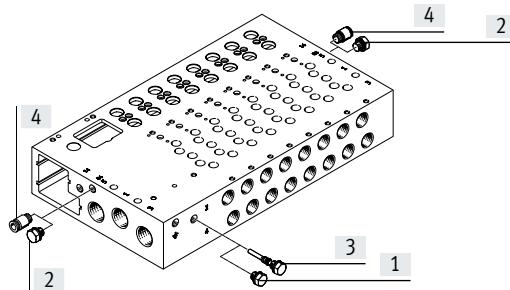

External pilot air supply

External pilot air supply is required for vacuum operation or operating pressures above 8 bar. The port for external pilot air supply (port 12/14) is located on the manifold rail.

Pilot exhaust air

The pilot air is exhausted via duct 82/84 of the manifold rail.

Pilot air supply

- [1] Blanking plug, short, with internal pilot air
- [2] Blanking plug for duct 12/14 with internal pilot air
- [3] Blanking plug, long, with external pilot air
- [4] Push-in fitting in duct 12/14 with external pilot air

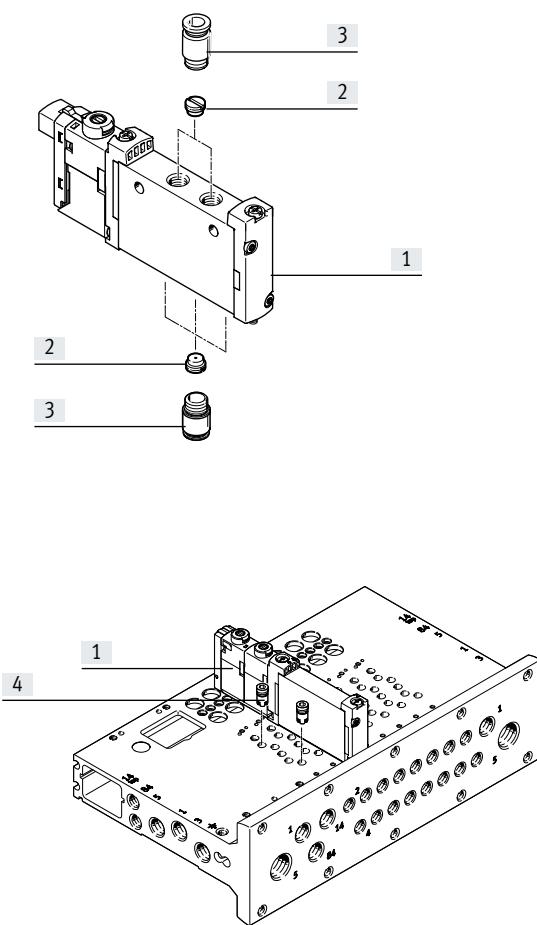

The manifold rails have an internal connection between duct 12/14 and duct 1.

To switch between internal and external pilot air, a blanking plug can be inserted into this connection.

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Pneumatic components

Exhaust functions

- [1] Valves VUVG
- [2] Flow restrictor for thread M5
- [3] Fitting
- [4] Fixed flow restrictor, self-tapping/check valve

Flow restrictor for thread M5

Semi in-line valve, individual electrical connection: flow restrictor can be fitted in port 1, 3, 5 and/or in port 2, 4.

Sub-base valve, individual electrical connection: flow restrictor can be fitted in port 2, 4.

Fixed flow restrictor, self-tapping

The fixed flow restrictor can be used to permanently set the exhaust flow rate in ducts 3 and 5.

The fixed flow restrictors are screwed into ducts 3 and 5 in the manifold rail.

Please see the relevant assembly instructions:
→ www.festo.com/sp

Check valve

Check valves block the flow towards the valves if back pressure develops in ducts 3 and 5 in the case of a high exhaust capacity, thereby preventing actuators from switching unexpectedly. The check valves are screwed into ducts 3 and 5 in the manifold rail. Please see the relevant assembly instructions:

→ www.festo.com/sp

Note

- It is not possible to use a check valve and a fixed flow restrictor (in the same duct) at the same time.
- When screwing in again, use the threads already present.

Characteristics – Pneumatic components

Operation with different pressures

Vacuum operation

Points to note with 3/2-way valves with pneumatic spring return:

The 3/2-way valves are available in a design with two valves in one valve body and with pneumatic spring return. With these valves, the force for the return movement is obtained from port 1.

Vacuum operation is only possible at port 3 and 5, not at port 1.

With external pilot air supply, vacuum can be connected at port 1, 3, 5 of the 5/2-way and 5/3-way valves.

Vacuum operation not possible when using the shut-off function (hot swap).

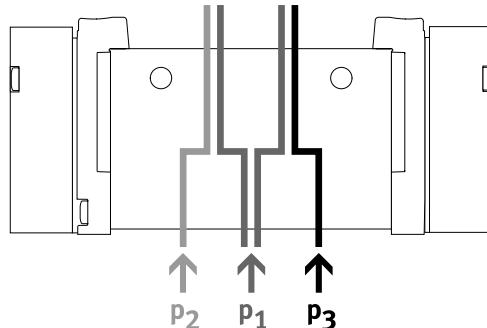

Reverse operation

The 3/2-way valves with pneumatic spring are not suitable for reverse operation, since at least the minimum pilot pressure must be present in duct 1.

Note

Pressure must be present at port 1.

Pressure deflector (internal pilot air)

- Two different pressures are required
- Different pressures can be connected at duct 1, 3 and 5

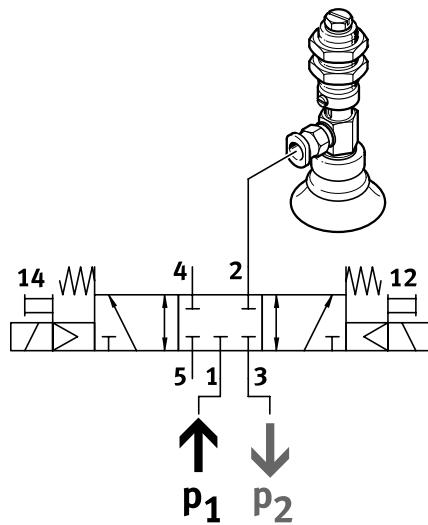

Advantages

Any pressure or vacuum can be connected at duct 3 and 5 both with external and internal pilot air

Note

- With internal pilot air, adhere to the minimum pilot pressure in duct 1
- With 2x 3/2-way valves without spring return, adhere to minimum pilot pressure in duct 1

Vacuum, ejector pulse and normal position

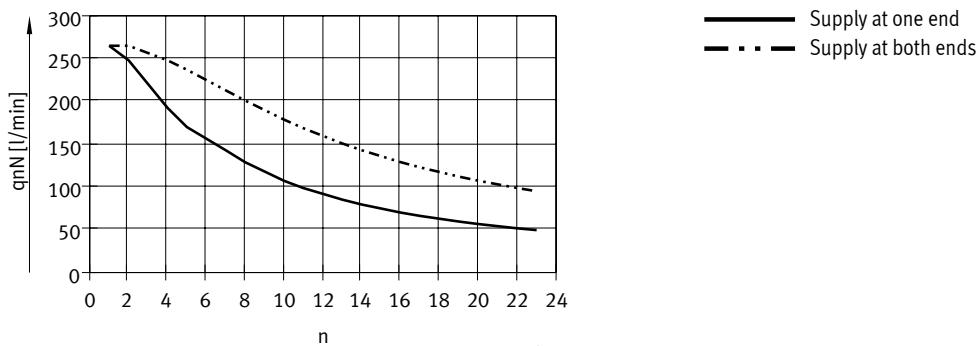

Vacuum, ejector pulse and normal position with internal pilot air can be achieved by connecting vacuum at duct 3 and pressure for the ejector pulse at duct 1.

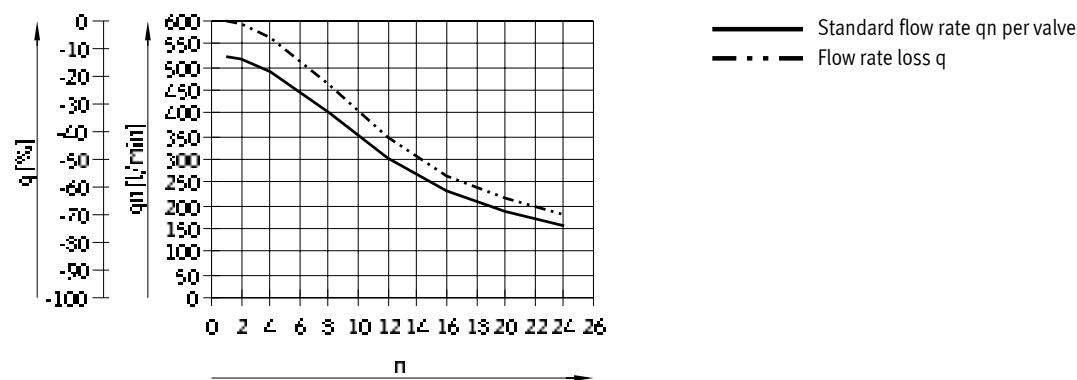

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Pneumatics

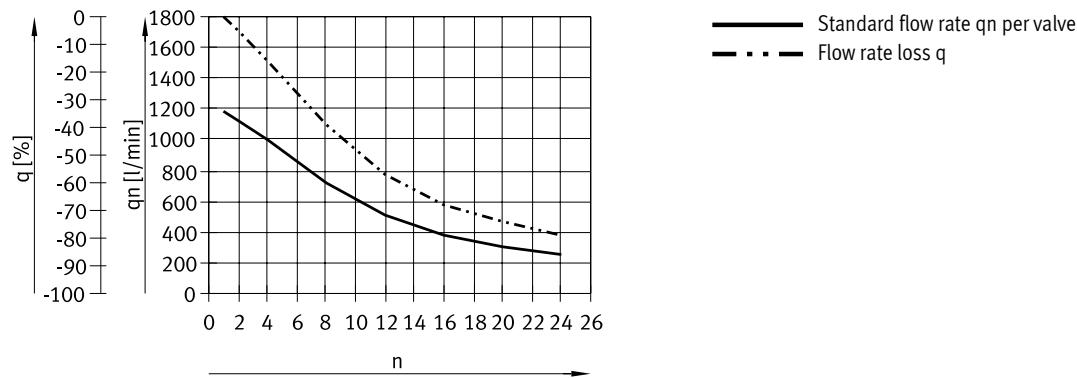

Standard nominal flow rate q_{nN} as a function of the number of switched valves n
Size 10 mm, 5/2-way valves

Size 14 mm

Size 18 mm

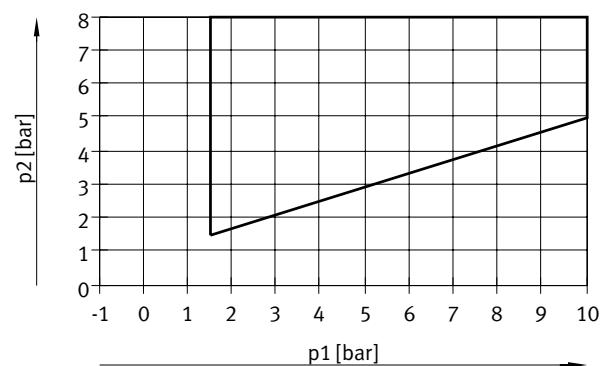

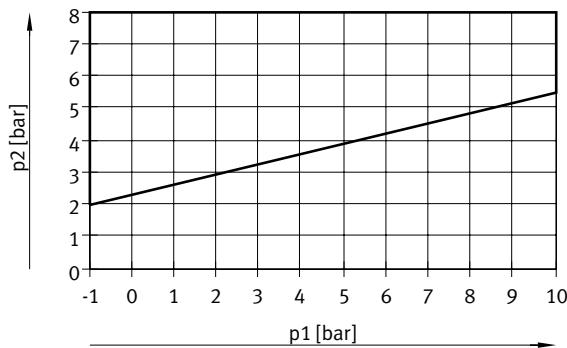

Characteristics – Pneumatics

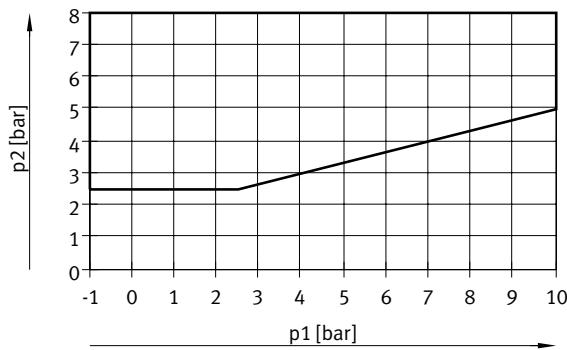

Pilot pressure p2 as a function of operating pressure p1

2x 3/2-way valve, reset method: mechanical spring

2x 3/2-way valve, reset method: pneumatic spring

3/2-way single solenoid valve and 5/2-way single solenoid valve

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Mounting

Valve terminal mounting

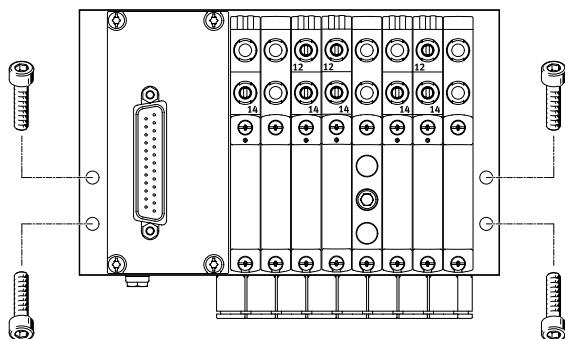

Sturdy terminal mounting via:

- Four through-holes for wall mounting
- H-rail mounting

 Note

Use the thread M5 provided on the manifold block for earthing the valve terminal.

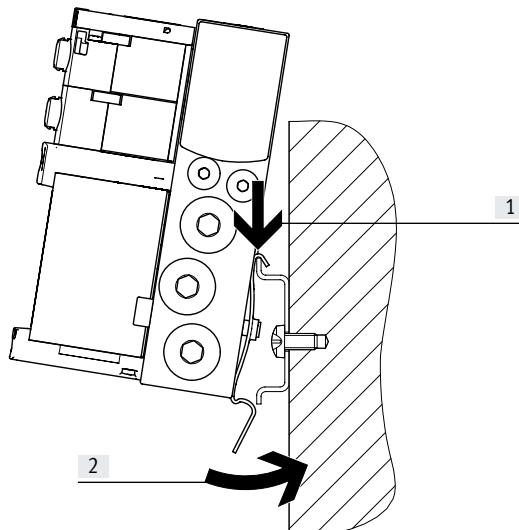

Wall mounting

Screw the valve terminal VTUG onto the mounting surface using four M4 screws.

The mounting holes are on the left and right side of the manifold rail.

H-rail mounting

Attach the valve terminal VTUG to the H-rail (see arrow [1]).

Swivel the valve terminal onto the H-rail and secure in place with the clamping element (see arrow [2]).

Attach the manifold rails to a rail of type TH35 to EN 60715 using the H-rail mounting kit VAME-T-M4.

Use the following screws (to DIN 912) for mounting:

- Size 10: M4x30
- Size 14: M4x40
- Size 18: M5x50

 Note

Permissible use of the H-rail:

- Manifold rail with outlet on the side or on top.
- H-rail exclusively for horizontal mounting.
- Vibration/shock loads are not permissible for this type of mounting.

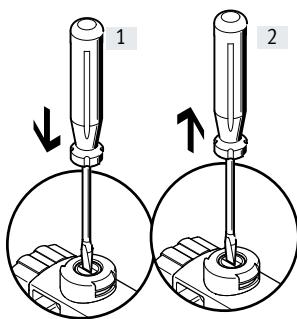

Size 14:

- Use H-rail of type TH35-7.5 for valve terminals with a maximum of 8 valve positions.
- Use H-rail of type TH35-15 for mounting in accordance with the standard and for more than 8 valve positions.

Characteristics – Mounting

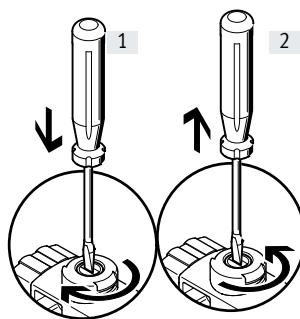

Manual override (MO)

MO with automatic return (non-detenting)

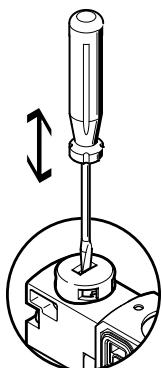

- [1] Press in the plunger of the MO with a pointed object or screwdriver.
The pilot valve switches and actuates the main valve.
- [2] Remove the pointed object or screwdriver.
The spring force pushes the plunger of the MO back.
Pilot valve returns to its initial position as does the single solenoid main valve (not the case with double solenoid valve code J).

MO with lock (detenting)

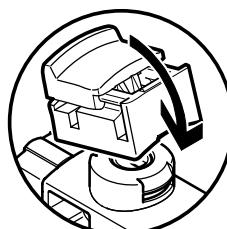

- [1] Press in the plunger of the MO with a pointed object or screwdriver until the valve switches and then turn clockwise through 90° until the stop is reached.
The valve remains in switching position.
- [2] Turn the plunger anti-clockwise by 90° until the stop is reached and then remove the pointed object or screwdriver. The spring force pushes the plunger of the MO back.
The valve returns to its normal position (not the case with double solenoid valve code J).

MO non-detenting – with coded cover cap

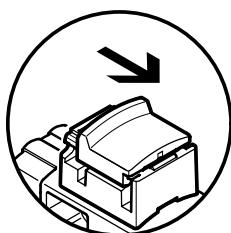

MO is actuated by pushing it with a pointed object or screwdriver and reset by spring force (detenting position prevented by coded cover cap).

MO detenting without tools – assembly

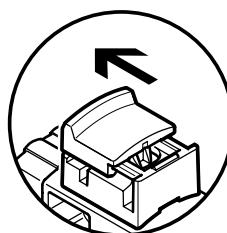

Clip MO with detent onto the pilot valve.
The cap for the MO can then be operated (detenting) without tools.

MO detenting without tools – actuation

- When sliding the cap for the MO with detent in the direction of the arrow:
- Cap locks into the stop position.
 - Pilot valve switches and actuates the main valve.

MO detenting without tools – actuation

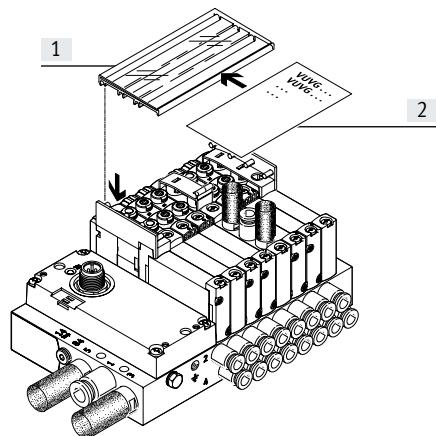

- When sliding the cap for the MO with detent in the direction of the arrow:
- Cap locks into the stop position.
 - The spring force pushes the plunger of the MO back.
 - Pilot valve returns to its initial position as does the single solenoid main valve (not the case with double solenoid valve code J).

Valve terminal VTUG with multi-pin plug connection and fieldbus interface

Characteristics – Mounting

Inscription system

Inscription label holder

- [1] Inscription label holder
ASCF-H-L1 (code TT)

- [2] Inscription area

Mount the inscription label holder to label the valves. Open the inscription label holder to insert the inscription label and actuate the manual override. The inscription label holders are available in different sizes depending on the number of valve positions.

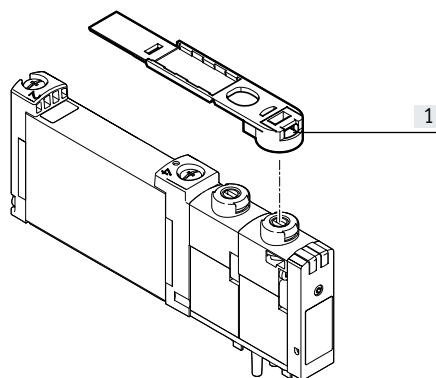

- - Note

Do not engage the manual override before mounting the inscription label holder.

When mounted, the retaining bracket for the inscription label holder covers the manual override of the valves beneath it.

The manual override for the two valves under the retaining brackets of the inscription label holder can then only be actuated in a non-detenting manner.

Identification holder

- [1] Identification holder ASLR-D-L1
(code TV)

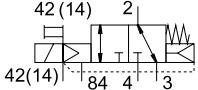

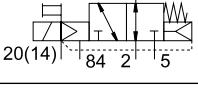

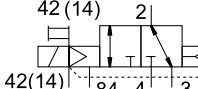

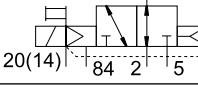

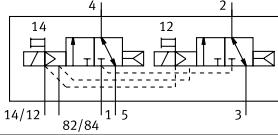

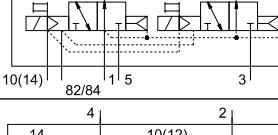

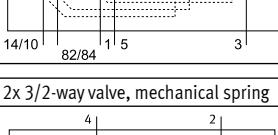

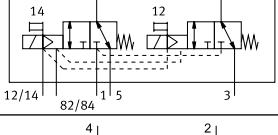

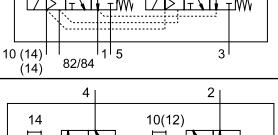

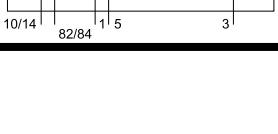

Use identification holders ASLR-D-L1 (code TV) to label individual valves. The identification holder is placed directly on the manual override.

- - Note

Do not engage the manual override before mounting the identification holder.

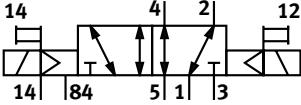

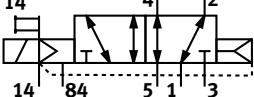

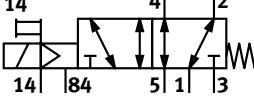

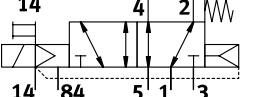

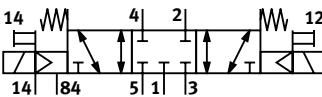

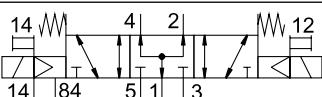

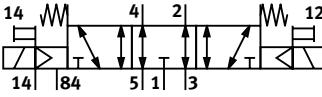

After the retaining brackets are fitted, the manual override can only be actuated in a non-detenting manner.

Peripherals overview example – Sub-base valves

Valve terminal with multi-pin plug/fieldbus connection and individually electrically actuated valves

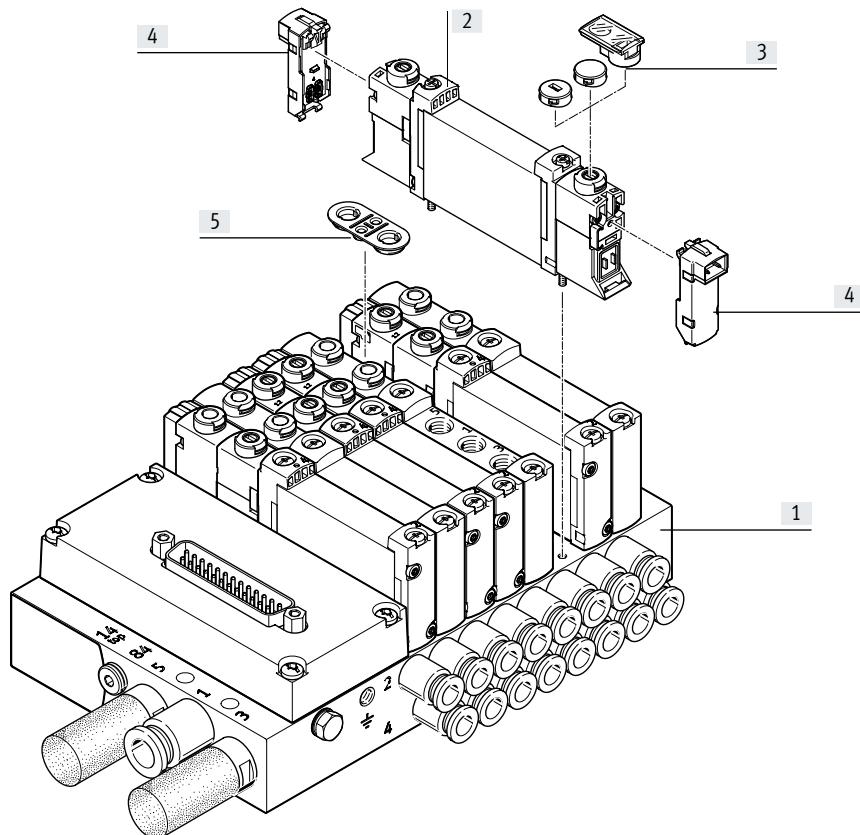

In applications with specific emergency stop requirements, it may be necessary to switch one or more valves separately from the valve terminal controller.

Valves VUVG (→ page 11) with an individual electrical connection are mounted on the valve terminal for this purpose.

Valves with individual electrical connection require a special seal when mounted within a valve terminal.

They are therefore ordered/fitted as follows:

- together with the valve terminal using the valve terminal configurator
- individually/subsequently as a substitute for a cover plate in a vacant position

Accessories

CE marking (see declaration of conformity) ¹⁾	To EU EMC Directive		
Corrosion resistance class CRC ²⁾	2		

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Data sheet – Multi-pin plug connection

The following multi-pin plug connections are available for the valve terminal VTUG:

- Sub-D (25-pin)
- Sub-D (44-pin)
- Ribbon cable (26-pin)
- Ribbon cable (50-pin)

Electric multi-pin

Each pin on the multi-pin plug can actuate exactly one solenoid coil.

If the maximum configurable number of valve positions is 24, this means that 48 valve functions can be addressed.

The valves can be switched using positive or negative logic (positive switching or negative switching).

Mixed operation is generally not possible; however, an exception is made for the V22 ... V25 variants with 25-pin Sub-D. With these variants, a specific range of valve positions (e.g. Com 16...19) is supplied with common voltage.

This allows these ranges to be switched with positive or negative logic and valve groups to be switched off independently of the other ranges. Mixed operation within a range is not permitted.

Note

A double solenoid valve occupies one valve position and two pins on the multi-pin plug. This means that the number of double solenoid valves per manifold rail is limited. (Pin allocation → page 182)

General technical data

Type	VAEM-L1-S-M1-25	VAEM-L1-S-M1-44	VAEM-L1-S-M3-26	VAEM-L1-S-M3-50
Number of pins	25-pin	44-pin	26-pin	50-pin
Electrical connection	Sub-D plug		Ribbon connector	
Max. no. of valve positions	24		24	
Degree of protection to EN 60529	IP67		IP40	
Material	PA		PA	
Note on materials	RoHS-compliant		RoHS-compliant	
Certification	c UL us – Recognized (OL) c CSA us (OL)			
CE marking (see declaration of conformity) ¹⁾	To EU EMC Directive			
Corrosion resistance class CRC ²⁾	2			
Weight [g]	53		45	48

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Data sheet – I-Port interface/IO-Link

Festo-specific, standardised interface for direct connection to the fieldbus by mounting the bus node CTEU or to an IO-Link master via a cable (in IO-Link mode).

I-Port interface/IO-Link

Versions:

- As I-Port interface for bus node (CTEU)
- IO-Link mode for direct connection to a higher-level IO-Link master

The following protocols are supported in connection with the associated CTEU bus node:

- CANopen
- DeviceNet
- PROFIBUS
- CC-Link
- EtherCAT

The electrical supply/transmission of communication data takes place via an M12 plug.

The valve terminal can be equipped with 4 to 24 (double solenoid) valves.

General technical data

Types of communication		IO-Link	
Electrical connection		<ul style="list-style-type: none"> • M12 plug, 5-pin • A-coded • Metal thread for shielding 	
Baud rate	COM3 COM2	[kbps]	230.4 38.4

Max. no. of valve positions	VAEM-L1-S-8-PT VAEM-L1-S-16-PT VAEM-L1-S-24-PT		8 16 24
Ambient temperature		[°C]	-5 ... +50
Product weight	Outlet on top Outlet on the side	[g]	49 100
Degree of protection to EN 60529			IP67
Certification			c UL us – Recognized (OL) c CSA us (OL)
CE marking (see declaration of conformity) ¹⁾			To EU EMC Directive
Corrosion resistance class CRC ²⁾			2

1) For information about the area of use, see the EC declaration of conformity at: www.festo.com/sp → Certificates.

If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

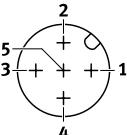

2) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

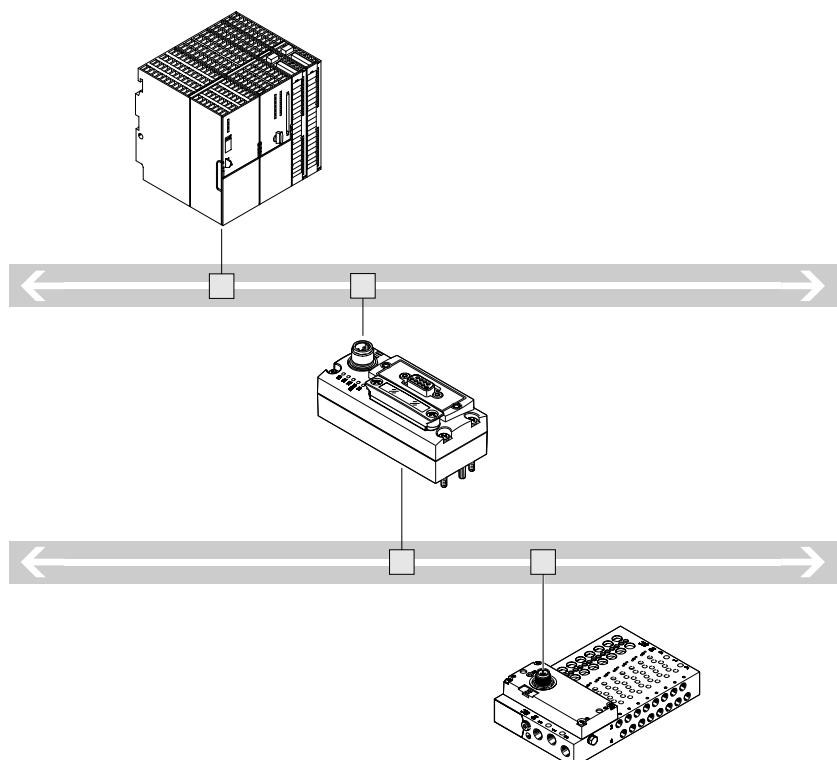

Valve terminal VTUG, I-Port interface/IO-Link

Data sheet – I-Port interface/IO-Link

LED display	Colour	Status	Function
Status LED X1	Red/ green	Off	No 24 V logic
		Static green	Everything OK
		Flashing green	Communication error (in the I-Port or IO-Link protocol)
		Flashing red/green	Load supply error (undervoltage or no load supply)
		Static red	Load supply error and communication error

Pin allocation – I-Port interface/IO-Link	Pin	Allocation	Description
	1	24V _{EL/SEN}	Operating voltage supply (electronics, sensors/inputs)
	2	24V _{VAL/OUT}	Load voltage supply (valves/outputs)
	3	0V _{EL/SEN}	Operating voltage supply (electronics, sensors/inputs)
	4	C/Q	Data communication
	5	0V _{VAL/OUT}	Load voltage supply (valves/outputs)

System overview – IO-Link

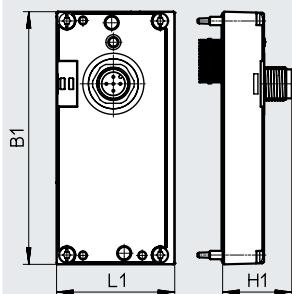

- Communication with higher-order controller via fieldbus
- Use a bus node CTEU compatible with the fieldbus protocol
- Up to 64 inputs/outputs (solenoid coils), depending on the valve terminal
- No preprocessing

Valve terminal VTUG, electrical connection block CAPC

Data sheet – CAPC

Function

The electrical connection block CAPC enables the decentralised installation of bus nodes CTEU on a valve terminal or input modules with I-Port interface.

Scope

- M12 connection technology (two interfaces)
- Enables the installation of valve terminals or other devices over a distance of 20 metres
- By using the accessory CAFM, the connection block can be installed on an H-rail

General technical data

Type	CAPC-F1-E-M12	
Dimensions W x L x H	[mm]	50 x 148 x 28
Fieldbus interface		2x M12 socket, 5-pin
Operating voltage range	[V DC]	18 ... 30
Max. power supply	[A]	2
Nominal operating voltage	[V DC]	24
Product weight	[g]	85
Cable length	[m]	20

Valve terminal VTUG with interlock

Data sheet – Interlock

**Interlock**

The interlock function enables the first 16 solenoid coils to be individually supplied externally.

This guarantees the safe release of these valves.

The interlock interface is established via external contacts for a single-pin connection or via safety output terminals for a double-pin connection.

General technical data

Types of communication	I-Port/IO-Link	
Number of valve positions	4...24	
Max. number of solenoid coils	48	
Number of interlock solenoid coils	16	
Number of inputs for reading back voltage	18 (16x interlock + 2 group supply)	
Mounting position	Any	
Nominal flow rate	[l/min]	330
Product weight	[g]	80
Residual ripple	[V _{SS}]	4
Baud rate	COM3	[kbps]
	COM2	[kbps]
IO-Link	Protocol	V1.0
	Connection technology	M12, A-coded
	Port type	Type B
	Number of ports	1
	Process data width OUT	6 bytes
	Process data width IN	4 bytes
	Minimum cycle time	11.5 ms (2.3 ms per frame = 2 bytes of user data)
Corrosion resistance class CRC ¹⁾	2	

1) Corrosion resistance class CRC 2 to Festo standard FN 940070

Moderate corrosion stress. Indoor applications in which condensation can occur. External visible parts with primarily decorative surface requirements which are in direct contact with a normal industrial environment.

Data sheet – Interlock

Interlock interface

Single-pin interlock interface

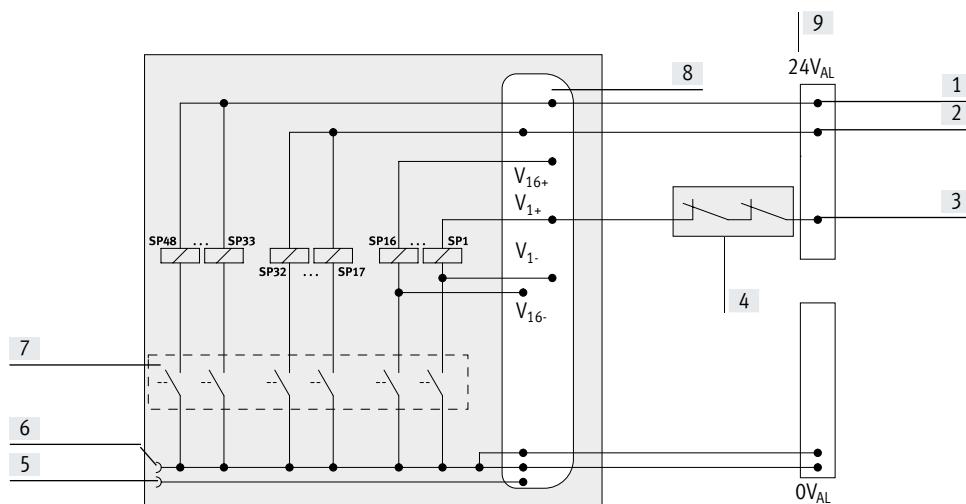

- The interlock interface is established via external positive switching contacts or single-pin switching safety terminals
- 16 solenoid coils can be actuated via the interlock (V_{n+})

- Solenoid coils that do not require interlock actuation can be supplied directly with 24 V from pins 1 ... 3
- Application of the respective input voltage is reported via the fieldbus as a process image

Double-pin interlock interface

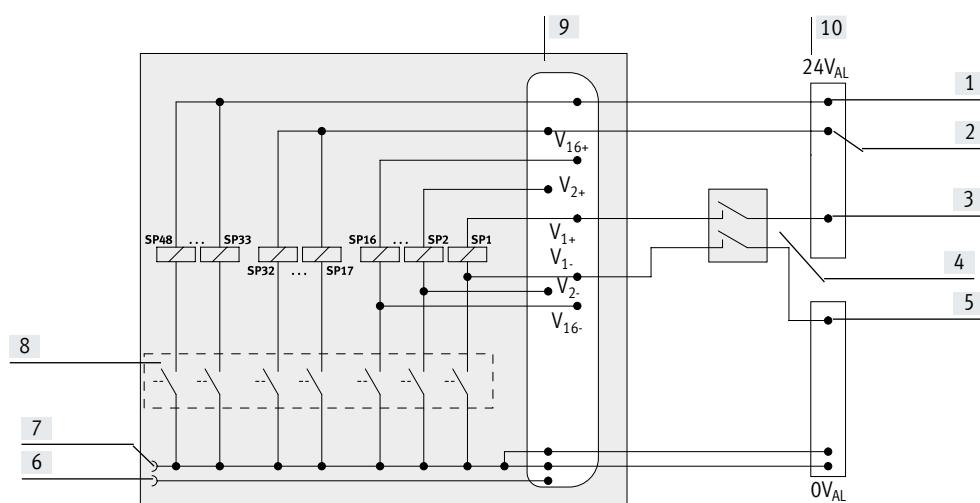

- The interlock interface is established via external positive-negative switching safety terminals
- The solenoid coils of the interlock valves are actuated via the corresponding pins in the sub-D plug (pins 7 ... 38)
- The solenoid coils that do not require interlock actuation can be supplied directly with 24 V (e.g. from pins 1 ... 3)
- Any difference in potential between V_{n-} and 0 VVAL/OUT must be below 5 V

Sample circuit diagram for a single-pin interlock interface

- [1] Power supply V_+ ; solenoid coil 33 ... 48, (no interlock)
- [2] Power supply V_+ ; solenoid coil 17 ... 32, (no interlock)
- [3] Actuation V_{n+} (via interlock)
- [4] Interlock contacts of the output terminal
- [5] I-Port connection pin 2, 24 VVAL/OUT (PL), load voltage supply
- [6] I-Port connection pin 5, 0 VVAL/OUT (PL), load voltage supply
- [7] Driver, actuated via fieldbus/I-Port
- [8] Interlock Sub-D connection
- [9] Power supply (interlock)

Sample circuit diagram for a double-pin interlock interface

- [1] Power supply V_+ ; solenoid coil 33 ... 48, (no interlock)
- [2] Power supply V_+ ; solenoid coil 17 ... 32, (no interlock)
